

Application: ETICS

webertherm joint profile used inside joints width of 15 – 60 mm in thermal insulation systems to get a permanent and weatherproof sealant of vertical movement joints for all thicknesses of insulation

Equipment of the product

webertherm joint profile is built up of two constantly press cut angles out of impact resistant and UV- and weather-proof PVC. The fibre glass reinforcement which is stuck together with the angle is alkali-proof and dislocation resistant. The angles are stuck together permanently by a flexible TPE strap band.

Packaging

25 pieces

2.5 m

Storage

Cool and dry storage

Horizontal transporting and stocking

The joint width must be at least 15 mm
